

## Recessed Grille Mats: LEED INFORMATION

LEED® (Leadership in Energy and Environmental Design) is a voluntary, consensus-based, market driven program that provides third-party verification of green buildings. The green building movement in the US has definitely grown over the past few years and American Floor Mats has been at the forefront of this industry trend. If you are working on a LEED® project, please let American Floor Mats know and we will provide you with the necessary documentation.

### ***Recessed Grille Mats & Grids may contribute to the following LEED® credits:***

**MR Credit 4.1, 4.2: Recycled Content:** American Floor Mats sources materials with the highest possible recycled content (80% - 49% Pre-Consumer, 31% Post-Consumer/Industrial) for all recessed grille matting products. Contact us for the most current recycled content.

**MR Credit 5: Regional Materials:** All recessed grilles mats are manufactured in the United States and all raw materials are sourced locally.

**IEQ Credit 5: Indoor Chemical & Pollutant Source Control:** This credit requires designers to employ permanent entryway systems (grilles, grates, etc.) to prevent dirt, debris, water and other particulates from entering the building at all high traffic entryways.

**IEQ Credit 4.3: Low-Emitting Materials (Carpet Systems):** Many grille mats and grates meet California 1350 test standards for low VOCs, an approved equivalent to the CRI Green Label Plus certification. Passing this test qualifies these mats for use in Collaborative for High Performance Schools (CHPS) jobs.

**ID Pilot Credit 54: Avoidance of Chemicals of Concern:** Increase the use of products and materials that disclose chemical ingredient data and reduce the concentrations of chemical contaminants that can damage air quality, human health, productivity and the environment.

**Beyond LEED: ID Credit 1, PVC-Free materials**

**C2C  
Certified**
